Call for Quick QUALITY Service!

One of three ORs at a medical facility in Englewood that QMS helped design and build.

A residential dual boiler system in Cresskill that QMS retrofitted and built.

A row of washers at a Laundromat in New Milford where QMS was responsible for all the plumbing and HVAC.

QMS does everything from the projects seen above to fixing that dripping faucet in your home.

Look how we have grown! We started out in 2005 as a new company with a relatively small customer base, and in six short years we have increased our customer base by 200%, and added to our staff by 300%. We then doubled our service fleet, which is soon to be tripled. Our customer base goes from an average (1 bathroom) residence to large (8-12 bathrooms) multi-wing mansions, large commercial buildings such as entertainment facilities, medical and surgical centers and Federal buildings. We have done new construction including assisting in the design and construction of a medical/surgical suite with 3 operating rooms; design and construction of water and waste systems for Laundromats along with potable water protection and waste disposal systems. We also design and install new kitchens and bathrooms.

With regard to heating equipment, we service and install everything from regular heating systems, steam, hot water or hot air all the way up to large commercial boilers. We are factory trained on high efficiency computerized boilers that are 98% energy efficient. Our company tries to be as green as possible. We install and service small air conditioning equipment all the way up to large 50 ton commercial chillers (residential chillers too!). We offer high energy efficient green systems in our air conditioning line-up also. We are a one stop shop for all the mechanical systems (heating, air conditioning, plumbing and building automation) in your home or facility.

We are a company big enough to tackle large commercial projects but small enough to give all our customers, whether residential or commercial, the attention and care they deserve. From new construction and system installations to fixing that annoying dripping faucet, QMS does it all.

I am back 100% full time. Following major back surgery and two knee surgeries, it has been a long road to recovery, and thankfully I am at the end of that road. So if in the last few years I have not been there for you, please give us another shot. You will not be disappointed, we will take care of your problem. Quality is the name of the company and that is what I will deliver. To help ensure this, I do not just hire anyone to be added to the management of QMS. I have added my son, Scott and a close family friend, Andrew who I know can both be trusted. I believe our service and knowledge base in the field can be second to none. We are continuously taking new courses and training on the latest equipment. We are here for you. I started in this business over 40 years ago and have worked in all phases of it. I have been asked by many manufactures to go out and troubleshoot a problem that no one has been able to solve, and to date have never left any unsolved. We have also opened another company, Quality Mechanical Consulting, LLC, to help your project planning and development needs.
